

MB Slab Bolster - Upper

Reliable reinforcing placement and positioning

Overview

The MB Slab Bolster Upper is a continuous reinforcement support designed to support upper layers of reinforcing steel above lower reinforcement mats in slabs and structural concrete assemblies. By providing continuous support along reinforcement runs, the Slab Bolster Upper helps maintain proper spacing between reinforcement layers while ensuring accurate concrete cover and reinforcement alignment.

Available in heights from $\frac{3}{4}$ " to 4" in $\frac{1}{4}$ " increments and protective finishes, the Slab Bolster Upper is well suited for slabs, bridge decks, mat foundations, precast components, and other heavily reinforced concrete structures.

Features

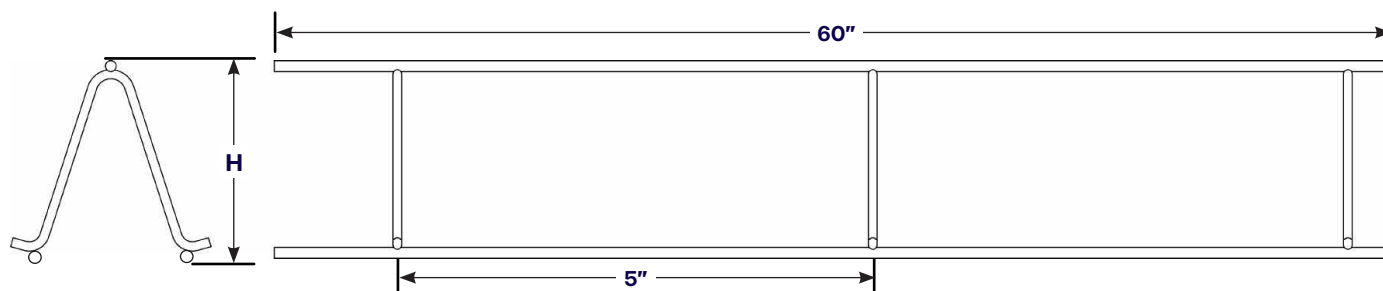

- **Ease of Use:** Continuous design reduces install time compared to the use of numerous individual supports.
- **Heavy-Duty Construction:** Welded wire construction delivers dependable reinforcement support in demanding structural applications.
- **Multiple Finishes:** Available in plain wire, plastic-protected, epoxy-coated, and fully plastic-encapsulated configurations to meet a variety of exposure and durability demands.
- **Uniform Support:** Reduces localized reinforcement deflection and settlement.

Standards

- Available for manufacture in accordance with recognized industry standards and reinforcing support practices established by ACI, Buy America, and CRSI guidelines.
