

Leviat

A CRH COMPANY

COMPLETE TILT

Optimized Tilt-Up Construction Products and Support

INDUSTRY-LEADING COLLABORATION

Tilt-up construction is nothing if not complex. Building codes, specifications, deadlines, drawing reviews - all requiring coordination between vendors, customers, and scores of project partners. With so many moving parts, it's often costly to keep track of individual processes and expensive delays are common for everyone involved.

Leviat's solution is simple: combine the services and expertise of three industry-leading product brands and their lifting, bracing, insulation, and connection products to create one, single-source resource for concrete sandwich panels.

This offering, Complete Tilt, minimizes the number of project vendors, optimizes engineering and detailing workflows, and reduces overall costs across all aspects of the design, construction, and erection of insulated tilt-up panels.

WHAT OTHERS ARE SAYING

"Having one single source for everything we need on insulated tilt-up jobs – design review, insulation products, lifting and bracing materials, not to mention just the overall support – has been a fantastic experience for us. For insulated site-cast panels, the Complete Tilt offering just makes sense.

Jason Schleicher
Lithko Contracting

"In the construction business, the schedule is always a critical factor. The Complete Tilt service allows for single source reliability for several critical path activities, and that definitely gives us an edge in meeting and beating our deadlines. That's good for us and our clients.

Bob Murray
Alston Construction

CONCRETE BENEFITS

OPTIMIZED WORK FLOW

A **Complete Tilt** project manager is assigned to each project to ensure all facets of tilt panel design and construction are optimized. Beginning early in the project, this manager coordinates communications, drawing reviews, and product deliveries. This single resource results in efficient information exchange and improved visibility through all project milestones.

CONSOLIDATED ENGINEERING MANUALS

Complete Tilt projects receive side-by-side panel drawings that indicate insulation layouts and lifting and bracing hardware placement. This creates a easy-to-read technical design reference for the construction team, reducing front-office review and on-site labor.

AT A GLANCE

Dedicated project manager overseeing all aspects of panel design and construction.

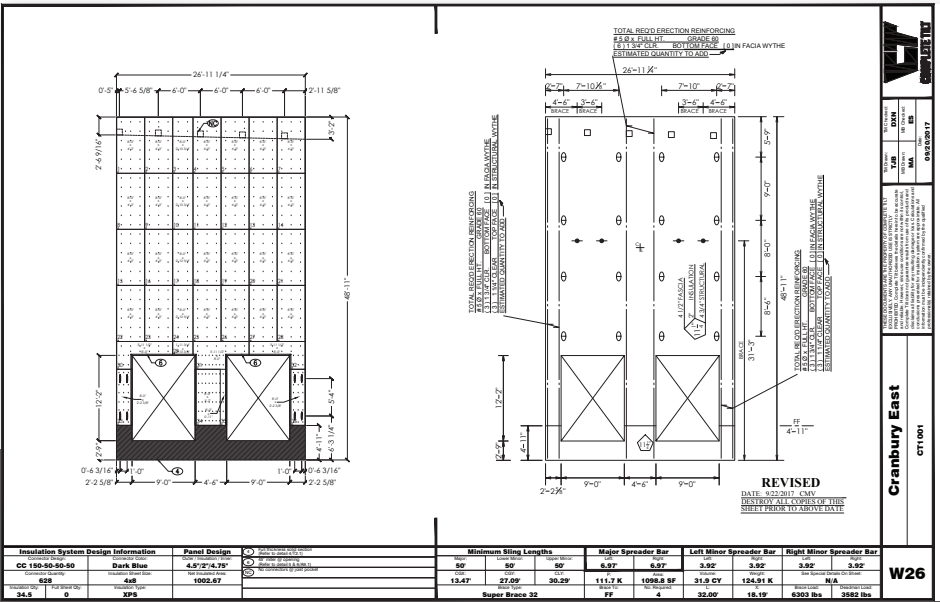

Consolidated engineering manuals provide easy-to-read lift and brace guide and insulation system layouts.

Optimal coordination of trades, resulting in enhanced construction efficiency.

Single source responsibility of detailing, analysis, and engineering assistance.

One consolidated panel reference for thermal, moisture and structural design resources.

Fewer vendors, resulting in enhanced transaction efficiencies.

The cornerstone of the Complete Tilt offering is a consolidated panel layout manual that covers all aspects of the thermal detailing, insulation, construction, and lifting and bracing of tilt-up concrete sandwich wall panels.

“We have really appreciated the assistance and final deliverables that we’ve received from Complete Tilt. Their project managers coordinate all of the various components necessary to specify and design sandwich panels and that benefit has helped us complete our design documents more efficiently.

Mark Hugeback
M+H Architects

“As industry leaders in tilt-up accessory supply, we’re always looking for ways to better serve our customers, and Complete Tilt gives us an additional tool. Our account managers now have a really smart way to streamline and bundle tilt-up materials for our clients’ projects. It’s win-win for everybody.
